based in large part on the comprehensive first course in ring theory by the same author this book provides a comprehensive set of problems and solutions in ring theory that will serve not only as a teaching aid to instructors using that book but also for students who will see how ring theory theorems are applied to solving ring theoretic problems and how good proofs are written the author demonstrates that problem solving is a lively process in comments following many solutions he discusses what happens if a hypothesis is removed whether the exercise can be further generalized what would be a concrete example for the exercise and so forth the book is thus much more than a solution manual

covering both classical and quantum models nonlinear integrable systems are of considerable theoretical and practical interest with applications over a wide range of topics including water waves pin models nonlinear optics correlated electron systems plasma physics and reaction diffusion processes comprising one part on classical theories

hyperbolic partial differential equations volume 1 population reactors tides and waves theory and applications covers three general areas of hyperbolic partial differential equation applications these areas include problems related to the mckendrick von foerster population equations other hyperbolic form equations and the numerical solution this text is composed of 15 chapters and begins with surveys of age specific population interactions populations models of diffusion nonlinear age dependent population growth with harvesting local and global stability for the nonlinear renewal equation in the von foerster model and nonlinear age dependent population dynamics the next chapters deal with various applications of hyperbolic partial differential equations to such areas as age structured fish populations density dependent growth in a cell colony boll weevil cotton crop modeling age dependent predation and cannibalism parasite populations growth of microorganisms and stochastic perturbations in the von foerster model these topics are followed by discussions of bifurcation of time periodic solutions of the mckendrick equation the periodic solution of nonlinear hyperbolic problems and semigroup theory as applied to nonlinear age dependent population dynamics other chapters explore the stability of biochemical reaction tanks an adi model for the laplace tidal equations the carleman equation the nonequilibrium behavior of solids that transport heat by second sound and the nonlinear hyperbolic partial differential equations and dynamic programming the final chapters highlight two explicitly numerical applications a predictor convex corrector method and the galerkin approximation in hyperbolic partial differential equations this book will prove useful to practicing engineers population researchers physicists and mathematicians

traditionally subsistence economies in developing countries are biomass economies housing itself energy furniture and utensils are still biomass products the yield of trees and shrubs provides thatch fodder and a host of other products which serve each family household deforestation is an erosion of local entitlement to subsistence resources as well as being an environmental problem that destroys local national and global common property resources the challenge for foresters and other rural development professionals is to build new landscapes which provide a range of biomass products to local users this book will contribute to that task by helping professionals to see new opportunities by working through not against the local people this book is aimed at foresters but its practical approach is worth the attention of all rural development practitioners as well as individuals within a range of professional backgrounds from engineering to sociology

this book reveals the sources of the disquiet prevailing among educators over the apparent failure of the public school system to develop moral responsibility in america s youth the doctrine of separation of church and state has made sectarian religious training illegal in public schools and tunis romein shows that the task of providing moral guidance suddenly thrust upon educators has disclosed their deep schisms in educational philosophy basic contradictions which have split american education from top to bottom romein explains the basic conflicts in education by examining three educational philosophies progressivism educational reconstructionism and classical humanism and comparing all of them with the traditional christian view he holds that all educational philosophies whether secular or not are based on faith and that all can be tested with regard to their beliefs about the nature of man and about the kind of moral responsibility education should develop in man with sincerity and frankness romein analyzes the moral and intellectual poverty of much of the thinking dominant in education today and he shows the necessity as well as the difficulty of making faith in god once more the underlying influence in american education

it is sometimes thought and very often said that political writing after its special day is done becomes more dead than any other kind of literature or even journalism i do not know whether my own judgment is perverted by the fact of a special devotion to the business but it certainly seems to me that both the thought and the saying are mistakes indeed a rough and ready refutation of them is supplied by the fact that in no few cases political pieces have entered into the generally admitted stock of the best literary things
